ADPICS PCHR0210 OPEN REQUISITION REPORT

Previously on the ADPICS PCHR0210 Open Requisition Report, requisitions with a canceled status appeared. For example, if a requisition contains one detail line which was shown as canceled (CNCL) and another line which was shown as posted to a purchase order (POCP), the requisition would be closed, but would still be included in the report. The software has been modified so that only open requisitions are displayed on the report. The modified software will be available in production on July 24, 1997.
